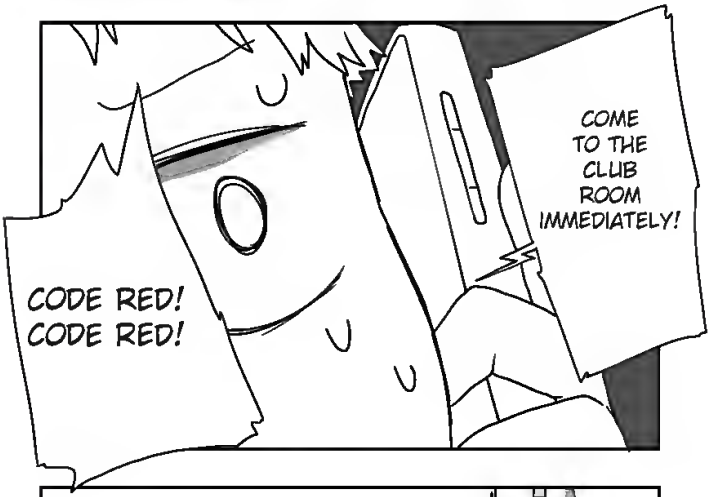
NEW DEBUT

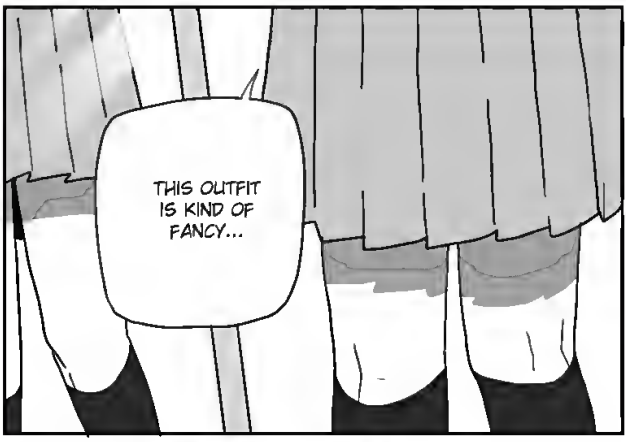
ATD-X
GOOD MORNING EVERYONE~
X-32
Hey, new coat!
WOW SHINSHIN, IS IT FINALLY YOUR DEBUT?
F-22
DUN
AMERICAN UNNIES, YOUR REIGN HAS COME TO AN END!
AS THE NEW COMPETITOR TO 5TH GEN WESTERN STEALTH AIRCRAFT!
AND AS "REVENGE" FOR PAST AIRCRAFT DEVELOPMENT!
EXPECT A FIERCE COMPETITION!
J-20
AMAZING SPIRIT!
I WELCOME ANY AND ALL COMPETITION
COME AT ME YOU SIMULATED ADVER...
F-35
ALLY, YOU DUMMY!

EMERGENCY CALL

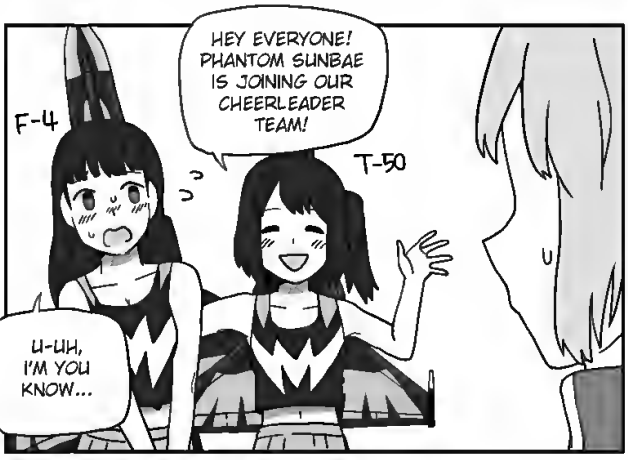
PART OF THE RUSSIAN NATIONAL ANTHEM



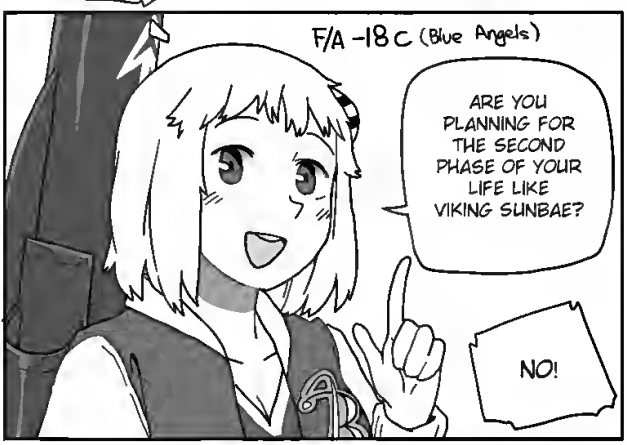
SPECIAL MARKING

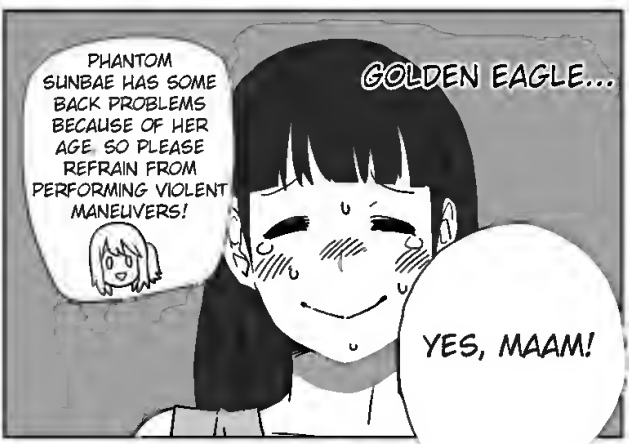


VETERAN IN ACTION



SUNBAE, DID YOU REALLY COME BACK?
I'm retiring soon too
F-5 (Patrouille de Suisse)
N-NO! I'M JUST TRYING OUT THE CHEERLEADER OUTFIT





PHANTOM SUNBAE HAS SOME BACK PROBLEMS BECAUSE OF HER AGE. SO PLEASE REFRAIN FROM PERFORMING VIOLENT MANEUVERS!
GOLDEN EAGLE...
YES, MAAM!

Anyan's comments:

It's FHS 37! This episode is mostly about portraying real life incidents.

On July 13th, we have finally laid our eyes on the ATD-X, which was seen before only as models. Instead of the black mock-up for RCS testing, this was revealed with a new livery, and it seems the markings are quite colorful. It reminds me of the Gundam.

The ATD-X got a working model after 24 years; the engine was developed by the IHI Corporation since 1995. The Japanese were quite proud of this, since they feel that they have developed something of their own free from United States influence unlike the previous development experience of the F2 (when the ATD-X was first revealed, the NHK's report included language like "revenge" to describe the native ground-up development process free of American influence. I [Anyan] was actually quite surprised by the unexpectedly ambitious tone. You're not that kind of character, aren't you?)

ATD-X Shinshin will undergo flight tests sometime these year, along with a plethora of tests. In 2018, 4 years from now, a decision will be made to either mass-produce the ATD-X independently, or to collaborate with other countries, and by 2035 or so, when the F-2 is retired, will be manufactured and deployed.

Anyan's comments continued:
Since Japan is a world renowned country for aerospace engineering, the new stealth aircraft should be interesting in terms of testing, such as the flight test. Since it is more than likely that technical problems will surface after flight testing, Japan's next-generation fighter development has really just begun.

The second episode is also about a recent event. The Iraqi Air Force was supposed to get some F-16's from the US but because of urgent domestic circumstances, they ordered some Su-25's really quickly from Russia. They were so urgent in needing the aircraft that they got some really dirty and worn down aircraft shipped and just slapped on the flag and got it running in 3 to 4 days.

The third and fourth episode was based on the F-4 aircraft that was retired and placed in the [Korean] Air Force Military Academy. You look great with that livery, Phantom!
Also, the aerobatic team of the Swiss Air Force Patrouille Suisse will be disbanded in 2016 along with the retirement of the F-5.
